Technologies

- ▶ TypeScript,
- ▶ React.js
- ▶ RTK Query
- ▶ React Router
- ▶ Ant Design
- ▶ Git, GitHub
- ▶ RTK Query
- ▶ Rapidapi

ABOUT THE WEBSITE

My project is a web application built using modern technologies like React, Vite, and TypeScript. I'm utilizing various APIs and managing data fetching with RTK Query. By leveraging React's powerful features for filtering and search functionalities, I'm aiming to create a dynamic user interface that meets user needs. For UI design, I'm using CSS and UI libraries such as Tailwind CSS, Ant Design, and MDBootstrap. Additionally, I'm incorporating multilingual support with i18next to cater to a broader audience. My focus is on ensuring seamless user experiences across devices by implementing responsive designs and in-app notifications. The project is thoroughly tested using Jest, with a strong emphasis on writing clean, concise, and maintainable code throughout the development process.
